

PRODUCT PROPOSAL · SEPTEMBER 2026

Mindful Moments with Amake Fe

A community platform — and a way for the community to support the work.

PREPARED FOR

Amake Fe

COVERING

The reading app, the studio, mobile money

The position

A Facebook page with nearly 200,000 followers. Years of real marriage and family stories, collected by phone and voice note, written by one person, published to an audience that keeps coming back.

And no way for any of that effort to be covered. Facebook's monetisation programmes are not open to creators in Zambia — no in-stream ads, no content bonuses, no subscriptions. The reach is real; there is no route back from it, and every hour behind it is absorbed by the person doing the work.

The audience is already built. What is missing is a way for it to give something back.

The proposal

Two applications and a payment rail:

The reading app

Where the community reads, follows a series, comments, votes and supports

The studio

Where you write, schedule, publish and post to Facebook

Mobile money

MTN MoMo, Airtel Money and Zamtel Kwacha, collected directly in the app

1. Facebook becomes the front door, not the destination

Facebook keeps doing what it does best: putting a story in front of nearly 200,000 people. Every release still goes out as a post, with its picture and its hook — and publishing to the app and posting to Facebook are a **single action**, not a second errand.

What changes is where the story finishes: the post carries a link, and the story opens in the app.

Facebook cannot tell you which part of a six-part series readers stop at. It cannot hold a reader's place, cannot be searched, cannot notify anyone, and **cannot take a contribution**. Those four gaps are the case for building something alongside it.

POSTED FROM THE STUDIO

The post goes out exactly as it does today — with the link at the end.

Same voice, same picture, same page. The one addition is the line that carries the reader into the app, where the rest of the story, the archive and the support live.

2. The apps turn an audience into a community

Reading is free and requires no account — a reader arriving from a Facebook post is reading in one tap. That is deliberate: the funnel cannot afford a sign-up wall in front of the story.

What the app adds on top of reach:

- **Serialised stories with the reader's place kept.** A six-part story brings one reader back six times. Retention is the thing Facebook does not provide.
- **A searchable archive by topic,** so four years of work keeps working instead of disappearing down a feed.
- **A community timeline** — the questions you answer, polls, notices — with comments and reactions, so the audience talks to you *and to each other* in a space you control.
- **Measurement that matters:** reads per part, completion, saves, comments. Which topic brings people back, and how long the next series should run.

THE READING APP

A reader lands from Facebook and picks up where they stopped.

The home screen keeps the part they are on, the latest stories, and the community post below it. No account, no sign-up wall.

THE STUDIO

Series retention part by part, story performance, and support in one view — the numbers Facebook cannot give you.

3. Community support: covering what the work costs

This is not a business built on the audience. It is a way for an audience to carry the cost of something it already values.

The work is real and it is not free — the hours on the phone listening, the writing and rewriting, airtime and data, and the running of the platform itself. All of it is currently absorbed by you. Community support is how that stops being true.

Readers contribute with mobile money, in a few taps — no card, no bank account, no app store. Every story stays free. The ask appears only *after* something — at the end of a part, under a post someone cared about — never in front of it. Nothing is gated, nothing is withheld, and no reader is ever asked to pay to read.

How it settles. The platform collects and handles the payment rails, hosting and operations, and retains 20% to cover them. 80% goes to you, settled with a full statement — what came in, what was deducted, what was paid, and into which account.

What modest participation covers, at K30 a contribution:

CONTRIBUTIONS IN A MONTH	COLLECTED	TO YOU
100	K3,000	K2,400
250	K7,500	K6,000
500	K15,000	K12,000

500 contributions is 0.25% of the existing following. The point is not the ceiling. It is that a small, willing fraction of an audience this size is enough to cover the work properly — without a single story going behind a paywall.

Support is also measured. Every contribution records *which ask produced it* — the story ending, the community post, the home card — so the placement that works can be kept and the one that intrudes can be removed. It records nothing about who gave.

4. Trust is the product, and it is enforced by the system

The reason people phone you in the first place is that their story will be handled safely. That promise is the asset, and on this platform it is not a policy — it is built in:

- Names are redacted automatically everywhere a story appears, including the Facebook post. Not by remembering to do it.
- Publishing is blocked if a phone number or email is left in a story by accident.
- No contributor data is stored at all — no names, no numbers, no recordings. Those stay on your phone. There is nothing here to leak.
- The party being paid does not record the payout. Settlements run through a separate console with separate access, so every kwacha can be accounted for.

5. Where it grows

NEXT

WHY IT MATTERS

Notifications

The largest single lever on repeat readership — telling nearly 200,000 people the moment a part lands, without paying for reach

A public web archive

Found by people who have never heard of the page, still reaching readers years after publication

App Store and Play Store

The same product, on the home screen

Recurring support

A standing monthly contribution, so the work is not funded month to month by chance

Sponsored support

A business underwriting a series, openly credited to the community

The platform also provides potential future paid experiences:

- Expert sessions
- Carefully selected services
- Affiliate commerce
- Masterclasses
- Courses

Each builds on what exists. None requires starting again.

IN ONE LINE

Facebook delivers the audience, the apps hold it, and community support lets that audience carry the cost of the work — in a market where the platform itself returns nothing.
